

MADDISON INDICATORS TABLE

1. COLUMNS

- a) country_iso3 (VARCHAR)→ an unique three-letter identifier for each country.
- b) country_name (VARCHAR) → represents the name of each country and should also be unique.
- c) indicator_code (VARCHAR)→an unique identifier for each used indicator. Can have 3 to 6 letters in this table.
- d) indicator_name (VARCHAR) → specifies the name of the used indicator.
- e) year (INTEGER) → the year to which the data corresponds.
- f) value (DOUBLE) → the value associated with each country, indicator and year.

2. DATASET OVERVIEW

→ this table uses three types of units of measurements: GDP, GDP per capita and population.

→ the table has 4349 rows distributed by 15 entities/countries (Belgium, Czechia, Germany, Spain, Estonia, France, Greece, Hungary, Ireland, Italy, Lithuania, Latvia, Poland, Portugal and Romania) and stores values from 1900 to 2022.

3. GEOGRAPHIC AND TEMPORAL COVERAGE

→ all indicators and most countries have data for all the year span. However, the following countries have a shortened year range:

- Czechia (1970-2022)
- Estonia (1973-2022)
- Ireland (1913-2022)
- Lithuania (1973-2022)
- Latvia (1973-2022)

4. DATA INTEGRITY

→ this table has no duplicate keys or values outside the expected year range.
