Decade	GDP per Capita	Previous Decade	Decade Change
1900	1,997.1	-	-
1910	1,949.7	1,997.1	-2.4%
1920	2,297.8	1,949.7	17.9%
1930	2,679	2,297.8	16.6%
1940	2,976.8	2,679	11.1%
1950	3,868.6	2,976.8	30.0%
1960	6,236.2	3,868.6	61.2%
1970	10,740.1	6,236.2	72.2%
1980	13,892.3	10,740.1	29.3%
1990	19,552.686	13,892.3	40.7%
2000	24,399.769	19,552.686	24.8%
2010	25,583.808	24,399.769	4.9%
2020	27,276.94	25,583.808	6.6%

Portugal's GDP per capita grew around fourteen times since 1900. The decades that had the biggest growth were the 1970s and the 1960s, and the lowest ones were 1910 and 2010. The slow growth in 2010 can be explained with the 2008 crisis, and in the 2020s the change is low partially because of covid and because it doesn't cover the data from the whole decade, only part of it. The growth in the 1960s might be due to the industrialization and the trade through EFTA, and in the 1970s it's probably the continued growth of the industrialization and trade.

Second query Society

Decade	GNI per Capita	Life Expectancy	Urban Population
1960	602.5	65.137	32.624
1970	1,945	68.638	37.846
1980	3,707	72.775	44.186
1990	10,585	74.938	50.698
2000	16,976	77.715	57.745
2010	21,531	80.839	61.128
2020	25,830	81.81	61.226

Between 1960 and 2020, GNI per capita grew from 603 to 25830, life expectancy grew almost seventeen years, from 65.1 to 81.8 and the urban population grew from 32.6% to

61.2%. The expansion of healthcare services over the years contributed to the growth of the life expectancy, and the largest growth were in the 1960s and 1970s. Health infrastructure such as Hospital de Santa Maria also supports the rise in life expectancy (it was the largest Hospital in Portugal and began construction in 1950).

The other countries had a considerable lead in terms of GDP per capita and were richer for most of the decades, but the gap became smaller as time went on. Portugal managed to stay ahead of Greece in the 1940s, 1990s, 2010s and 2020s, but the other countries stayed ahead of Portugal at all times, except Ireland in 1900, because it had no recorded data. Some countries remained relatively consistent in terms of their ranks, like Italy, Germany and other fluctuated more.

	Life expectancy gap vs Portugal	+5.8	+4.8	+3.0	+2.6	+1.4	+0.3	-0.7

In 1960 Portugal was the poorest of these countries in terms of GNI per capita, Spain was at 135% of Portugal's level, Greece 160%, Ireland 190%, Italy 238%, Germany 299%, Belgium 323% and France 352%. By 2020 the gap had gotten much smaller, with Spain at 125%, Italy 147%, France 174%, Belgium 208% and Germany 211%. Portugal managed to stay slightly ahead in terms of life expectancy in the 2020s when compared to Greece and Germany.

The data shows that Portugal's GDP pc converged from around 49% to 76% at its highest in 1990 and then stalled to around 70% in 2020s. The strongest gains were from 1930 to 1940, possibly because of the Western Europe average falling during World War II and due to Portugal being neutral while the rest of Europe was disrupted, and 1960 to 1970, possibly from the industrialization as stated before, and from 1980 to 1990, possibly to do with the entry in the European Economic Community in 1986.

	Portugal life expectancy gap (in years)	-5.3	-4.6	-3.5	-2.9	-2.5	-2.1	-1.5

Portugal's GNI per capita was a small fraction of the Western European average in 1960, and it rose mostly in the 1990s with EU accession and funds, then stalled after 2000.

In terms of life expectancy Portugal was around 5 years below the average in 1960, and by 2020 it almost closed the gap, with closing it steadily every decade. Portugal has converged more in terms of health than on income, which suggests that better healthcare and living conditions were a bigger priority rather than income growth.

In terms of GDP per capita, these countries all started below the GDP pc of Portugal, but in 2010s most of them had gotten close or surpassed Portugal in that regard, and in 2020s, all but Romania and Latvia had surpassed Portugal's GDP per capita, remaining close to surpassing it. This rise in GDP per capita might be due to the recovery these countries had after the end of communism, and the help from the European Union, while Portugal's growth stalled around the 2010s. All the countries except Portugal had at least 200% current GDP per capita compared to their respective country in the 1990s.

In 1990 all seven countries were far poorer than Portugal in terms of GNI per capita, from Romania with 13.7% of Portugal's level to Czechia with 48.2%. By 2020 the gap had already closed a lot compared to before. Czechia at 107.1% and Estonia at 107.4% had already passed Portugal by, Lithuania reached 95.9%, Latvia 80.5%, Poland 76.9%, Hungary 76.2% and Romania 62.4%. The gap closing in fits the recovery after the end of communism in the late 80s, and EU funds, while Portugal's income looks like it stalled in the 2010s.
